4d SITE INDEX

All SI work shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees in the stand. SI is estimated when both the tree age and height, estimated SI is shown after or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren\'t present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated SI. Site Index values are inventory Type Group and SI Estimated source code.
