4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is calculated using the current height and breast height age. If a stand is younger than 50 years, breast height age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. Immature stands, Non-Forest, Alpine, etc. The method which always provides a reasonable estimate is to use the Species and Inventory Type Group and SI Estimated source code.
