4d SITE INDEX

Site index is the nearest metre referenced at 50 years breast height age. It is based on the age and height of the dominant and co-dominant trees. Site index is determined by age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. young stands (<50yrs). It is recorded by a slash which always precedes the estimated SI. Refer to Site Index Inventory Type Group and SI Estimated source code.
