4d SITE INDEX

SI is an answer to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. SI cannot be determined for trees less than breast height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when access SI trees cannot present(e.g. young stands (<30yrs). It is denoted by a slash which always precedes the SI number (/15). Estimated SI values are Inventory Type Group and SI Estimated source code.
