4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees and is determined from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI may be estimated from a site series association, if present, e.g. (Fdc) stands in 05/xx1 - this is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
