4d SITE INDEX
SI is the average height, in metres reference at 50 years breast height age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
Estimated site index is recorded when a tree cannot present, e.g. young stands (<50yrs). It is derived by a search which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
