**4d SITE INDEX**

All SI are shown to the nearest metre referenced at 50 years breast height age. SI may be estimated by a variety of site or leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown often, or replaces the SI.

**4e ESTIMATED SITE INDEX**

SI is estimated when suitable SI trees aremt present; e.g. immature stands, or SI trees are not the leading species. Estimated SI Associated fields in the data base are inventory Type Group and SI Estimated source code.
