4d SITE INDEX

Site Index is the height of the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is known effective Height less 10.

4e ESTIMATED SITE INDEX

If an estimated site index value appears behind present, e.g. young stands (<30yrs) - SI is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
