4d SITE INDEX
All SI are shown for site steamed metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from local area height relationships SI is known after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated where suitable SI trees cannot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes it. Associated trees in the data base are Inventory Type Group and SI Estimated source code.
