4d SITE INDEX

Site Index is the expected metre referenced at 50 years (Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from sample plots, estimates are made by experienced cruisers.

4e. ESTIMATED SITE INDEX

Estimated Site Index is used when accurate SI cannot present e.g. young stands (<30yrs). It is derived by a stand which always precedes it. Associated Note in the data base are inventory type group and SI Estimated source code.
