4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is known either, or reduces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremot present, e.g. young stands or cutovers. Site trees are tagged with a slash which always precedes it. Association fields in the data base are inventory Type Group and SI Estimated source code.
