4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. SI is usually calculated from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aeroid present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the estimated site index. Both of these are inventory Type Group and SI Estimated source code.
