4d SITE INDEX
50 SI are shown to the nearest metre referenced at 50 years
Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. SI values can be derived from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren=t present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes estimated SI values. Site Series are inventory Type Group and SI Estimated source code.
