4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. The species is identified by the dominant leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. Recently Logged, Burned, Non-Forest. Estimated SI immediately precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
