4d SITE INDEX

Site Index is the average stand height attained at 50 years. Mature Height Age. SI is based on the age and height of the dominant trees. The dominant trees are the largest trees per hectare, usually the tallest, estimated at a mature (final) or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when outside SI curve, cannot present, e.g. young stands (<50yrs). It is denoted by a slash which always precedes the estimated value (e.g. /20). Source is the inventory Type Group and SI Estimated source code.
