4d SITE INDEX

SI 20 is shown to the nearest metre referenced at 50 years breast height Age. SI is based on the age and height of the dominant and co-dominant trees. SI is derived from the tree age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren=t present; e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated value. Codes that are Inventory Type Group and SI Estimated source code.
