4d SITE INDEX
Site Index is the height in the nearest metre referenced at 50 years (breast height) Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height measurements it is estimated either, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when surveys for trees cannot present, e.g. young stands (<10yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
