4d SITE INDEX

SI is expressed as the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index curves relate height to age and change for each species as shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when available SI trees aren't present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated value. The codes are inventory Type Group and SI Estimated source code.
