4d SITE INDEX

Site Index is based on the nearest metre referenced at 50 years Breast Height Age. It is based on the age and height of the leading species. When an accurate SI cannot be obtained from the site information, an estimate may be entered (see below).

4e. ESTIMATED SITE INDEX

Estimated Site Index is based on the species present, e.g. young stands (<80yrs). If a SI estimate is entered, a Confidence Level is recorded. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
