4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Site index is the average height of dominant leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands, recently logged. SI is shown after the SI it replaces preceded E. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
