4d SITE INDEX
SI 20 and 30 are the nearest metric referenced at 50 years breast height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height measurements in trees, either, or requires the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren=t present, e.g. young stands (<10yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
