4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Where there is no known age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees almost present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the SI. Estimated SI's are derived from site inventory Type Group and SI Estimated source code.
