4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Where the relationship between age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aannot present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated site index. The Species are inventory Type Group and SI Estimated source code.
