4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. SI is estimated from site series or obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when Leading SI trees aremt present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the SI. Estimated SI in the Inventory are Inventory Type Group and SI Estimated source code.
