4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height determined SI is shown either as a range or as a Type Group and SI Estimated source code.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present. e.g. young stands (<10yrs). SI is denoted by a leach which shows the estimated range of site index values. SI values for all leaves are inventory Type Group and SI Estimated source code.
