4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height, estimated SI is known either as indicated in the SI Estimated source code.

4e: ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. Immature stands. Estimated SI is based on the species which always populate it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
