4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant trees. SI is estimated from site series or is calculated from age and height, estimated SI is shown after a / or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees were absent present, e.g. young stands or recently logged areas. Estimated SI is shown by a slash-other stream, preceding the SI. Estimated SIs in the data base are Inventory Type Group and SI Estimated source code.
