4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height age (SI). Site index is the average height of dominant trees in a stand. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren=t present, e.g. immature stands. Where SI is estimated, the SI code number always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
