4d SITE INDEX

Site index estimates are for trained merits referenced at 50 years. Where applicable, the estimate is based on the age and height of the leading species. When an accurate SI cannot be obtained from the given information, a range is provided (ex. 14-18).

4e. ESTIMATED SITE INDEX

As in previous column, but the species is not the current present, e.g. the species is what is thought would be present if a stand which always consists it. Associated fields in the data base are inventory type Group and SI Estimated source code.
