4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI values are derived from a variety of site index leading species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. Non-Forested, Non-Productive, Alpine, Rock, Recent Cutblocks, Wetlands. A description of the methods used to derive the estimated SI is found in the data base and in the Inventory Type Group and SI Estimated source code.
