4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees when the stand reaches breast age and height, estimated SI is shown when an increase the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremot present, e.g. young stands (<30yrs). It is identified by a slash which always precedes the estimated SI number. Site Index source are Inventory Type Group and SI Estimated source code.
