4d SITE INDEX
Site index is the vertical metre referenced at 50 years breast height age. It is based on the age and height of the leading species. When an accurate SI cannot be obtained from height and age, a SI estimate can be made from associated species.

4e. ESTIMATED SITE INDEX
Site index estimates are made for leading species present, e.g. young stands (<30yrs). If a site index is not attributed to a stand which always possesses it. Associated fields in the data base are Inventory Type Group and SI Estimated Source code.
