4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is based on site curves for the species listed in the Site Index Table. SI is estimated from the data base inventory age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. Deciduous leading stands, young stands, or Non-Forest. Always provided if associated fields in the data base are Inventory Type Group and SI Estimated source code.
