4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Estimated SI is shown as a decimal to the nearest age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren/d present, e.g. young stands (<30yrs). It is denoted by a slash which always follows the estimated species. The SI data below are Inventory Type Group and SI Estimated source code.
