4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years.
Site Index is the average height of the tallest 100 trees per hectare at breast height age. Where an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands, recently logged, etc. Site Index Type Group and SI Estimated source code.
