4d SITE INDEX
Site Index is the 50 year tree reserved metre referenced at 50 years breast height age. It is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height measurements, an estimate may be made.

4e ESTIMATED SITE INDEX
Estimated site index is the site index value determined present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated Source code.
