4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the site tree. Site trees are selected as the tallest tree of average age and height, established SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees cannot present, e.g. young stands (<30yrs). It is denoted by a east which always follows the estimated site index. Both SI and are inventory Type Group and SI Estimated source code.
