4d SITE INDEX

All SI are shown by the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the Type Group. SI is estimated when the stand is less than age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremot present, e.g. young stands (<30yrs). It is denoted by a stash which always precedes the estimated SI value. SI values are from the Type Group and SI Estimated volume table.
