4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. SI may not be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable site trees aremot present, e.g. young stands (<30yrs). It is denoted by a stash which always follows the site class (example A/3). Site class data base are Inventory Type Group and SI Estimated source code.
