4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height Age. SI is based on the age and height of the dominant and co-dominant trees. If a stand is between site age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremt present, e.g. immature stands, or stands with a history of fire which always precludes or successful hists in the Site Series inventory Type Group and SI Estimated source code.
