4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years breast height Age . SI is based on the age and height of the dominant layer. Site index estimates are determined by referencing age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aren;t present, e.g. young stands (<30yrs). It is denoted by a dash which always follows the estimated site index. Codes are Inventory Type Group and SI Estimated source code.
