**4d SITE INDEX**

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is derived from a variety of forest site sampling systems. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

**4e ESTIMATED SITE INDEX**

SI is estimated when suitable SI trees cannot present, e.g. non-commercial species, or the species is absent. The estimation procedure is documented fields in the data base are inventory Type Group and SI Estimated source code.
