4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. Where an actual site curve is used for a leading species, that species SI symbol is followed by age and if height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when suitable SI trees arenot present, e.g. young stands <40yrs, or the SI is unknown. The species which always provides the SI. Any species fields in the data base are inventory Type Group and SI Estimated source code.
