4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI 20 is used for all non-tree and non-stocking species. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e. ESTIMATED SITE INDEX

SI is estimated when outside SI trees were present, e.g. adjacent stand. The SI is estimated from a table which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
