4d SITE INDEX

SI is an estimate to the nearest metre referenced at 50 years breast height Age. SI is based on the age and height of the leading species. When an accurate SI cannot be obtained from age and height estimates or when age appears low (i.e.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremt present, e.g. young stands (<15yrs). It is blended by a slash which always precedes it. Associated fields in the data base are inventory Type Group and SI Estimated source code.
