4d SITE INDEX
SI 50 are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant and co-dominant trees. Site index estimates are inventory age and height, estimated SI is known after or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees aremt present, e.g. young stands (<30yrs). It is denoted by a slash which always precedes the estimated number. Trees that are inventory Type Group and SI Estimated source code.
