4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years breast height age. SI is estimated when suitable SI trees aren't present, e.g. missing species, when an accurate SI age isn't available or when a stand is always tending to/some. When an accurate SI age and height is present from sampling activities, these are accepted as the SI value and inventory age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aren't present, e.g. missing species, when an accurate SI age isn't available or when a stand is always tending to/some. When an accurate SI age and height is present from sampling activities, these are accepted as the SI value and inventory Type Group and SI Estimated source code.
