4d SITE INDEX
All SI are entered to the nearest metre referenced at 50 years breast height age. SI is based on the age and height of the dominant layer. When an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when Leading species cannot present, e.g. presence of Minor species. Site Series is a blank which always accompanies the calculated fields in the data base are inventory Type Group and SI Estimated source code.
