4d SITE INDEX
All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on the age and height of the dominant trees. Further an accurate SI cannot be obtained from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX
SI is estimated when suitable SI trees are not present, e.g young stands (<30yrs). SI is determined by a stash which always accompanies an estimated SI. The stash may also have an Inventory Type Group and SI Estimated source code.
