4d SITE INDEX

All SI are shown to the nearest metre referenced at 50 years Breast Height Age. SI is based on tree age and height which always leading species. SI is accurate for attempt to estimate from age and height, estimated SI is shown after, or replaces the SI.

4e ESTIMATED SITE INDEX

SI is estimated when suitable SI trees aremot present, e.g. immature stands. SI is estimated using the site tree method which always precedes it. Associated fields in the data base are Inventory Type Group and SI Estimated source code.
